About

Information Technology graduate with hands-on experience in full-stack and backend development, and AI-powered applications. Skilled in Java, Python, JavaScript, React, REST APIs, SQL, Generative AI, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG). Experienced in building responsive web applications, real-time backend systems, security-focused software, and AI/ML solutions. Strong foundation in object-oriented programming, API integration, debugging, Docker, Git, Linux, and software development. Interested in building scalable applications and integrating AI and LLM capabilities into modern software systems.

EDUCATION

Bachelor of Technology in Information Technology

Government Engineering College Barton hill

8.2 CGPA

Higher Secondary Education | (CBSE)

Sarvodaya Central Vidyalaya

90.4%

Secondary Education | (CBSE)

Sarvodaya Central Vidyalaya

89.6%

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, C

AI & Generative AI: Artificial Intelligence, Machine Learning, Generative AI, LLMs, Prompt Engineering, RAG, Embeddings, Vector Databases

Web & Backend: HTML5, CSS3, JavaScript, Node.js, FastAPI, REST APIs, Socket.IO

Databases: SQL, MongoDB, FAISS

DevOps & Tools: Git, GitHub, Docker, Linux, supabase, vercel, render

Software Engineering: Object-Oriented Programming, Debugging, API Integration, Real-Time Applications, Software Testing, Secure Software Development

LEADERSHIP & VOLUNTEERING

DESIGN LEAD | 2024-2025

CSI SB GECBH

DESIGN TEAM MEMBER | 2024-2025

IEDC GECBH

PROJECT MENTOR | March 2025

ISTE PDC EVENT

PROJECT MENTOR | March 2025

Projectaro 4.0, CSI SB GECBH

EVENT VOLUNTEER | March 2025

IGNITE, CSI GECBH

PROJECT

AI-Powered Binary Analysis and reverse Engineering | (Main project)

Python | Machine Learning | GNN | Cybersecurity

- Developed an AI-powered malware detection system combining static and dynamic binary analysis.
- Built a GCN-based static analysis pipeline using Control Flow Graphs (CFGs).
- Integrated sandbox-based dynamic analysis for behavioral monitoring and security verification.

GreatCode – AI-Powered Coding Platform | (individual project)

- Developed a LeetCode-style coding platform with AI-powered PDF parsing using Gemini to extract programming problems and test cases.
- Implemented Google OAuth, secure file storage, and problem management using Supabase.
- Integrated an in-browser Python code execution environment using Pyodide, with automated test case evaluation.
- Deployed the frontend on Vercel and backend on Render.

Technologies: React, Python, FastAPI, Supabase, Gemini AI, Pyodide, JavaScript, REST APIs, Vercel, Render.

MinuteOfTheMeeting AI | (individual project)

Next.js | FastAPI | Python | Hugging Face | Docker

- Developed an AI-powered application to generate structured Minutes of Meeting (MoM) from audio, video, and text.
- Integrated AI-based transcription and summarization through a FastAPI backend.
- Built a responsive Next.js frontend with file upload and meeting processing workflows.
- Containerized the application using Docker with separate frontend and backend services.

Vehicle Health Monitoring System | (Mini project)

React | Flask | Python | REST APIs | Socket.IO | scikit-learn

- Developed a full-stack real-time vehicle health monitoring application.
- Built React frontend and Flask backend with Socket.IO for live data updates.
- Integrated a Random Forest model to detect engine anomalies with 65% accuracy.

SCT project/Internship | (team project)

Python | Flutter | AI/ML

- Contributed to an AI-powered platform featuring ECG/image enhancement, smart annotation, quizzes, and real-time collaboration.
- Supported development of AI-enabled healthcare education features.

Virakupura project | (team project)

Embedded Systems | Sensors

- Developed an interactive sensory wall using ultrasonic sensors and DFPlayer Mini.
- Integrated hardware and software to trigger theme-based audio interactions.
