About

AI/ML-focused Information Technology student with experience developing intelligent systems using Python, Graph Neural Networks, machine learning, FastAPI, and real-time data processing. Hands-on experience building AI-assisted applications, REST APIs, and full-stack software solutions. Passionate about large language models, agentic AI, conversational systems, and reliable AI evaluation, with a strong interest in developing scalable AI products that improve developer productivity and technical assessment.

EDUCATION

Bachelor of Technology in Information Technology	
Government Engineering College Barton hill	8.2 CGPA
Higher Secondary Education (CBSE)	
Sarvodaya Central Vidyalaya	90.4%
Secondary Education (CBSE)	
Sarvodaya Central Vidyalaya	89.6%

TECHNICAL SKILLS

Programming Languages: Java, Python, C, JavaScript
Web Technologies: HTML, CSS, React.js, Node.js , FastAPI, WebSocket
Database Technologies: MongoDB, SQL
Machine Learning & AI: Scikit-learn, Graph Neural Networks (GNNs), Random Forest, Machine Learning
Tools & Concepts: Linux Basics, REST APIs, Git/GitHub

Volunteer experience

DESIGN LEAD	2024-2025
CSI SB GECBH	
DESIGN TEAM MEMBER	2024-2025
IEDC GECBH	
PROJECT MENTOR	March 2025
ISTE PDC EVENT	
PROJECT MENTOR	March 2025
Projectaro 4.0, CSI SB GECBH	
EVENT VOLUNTEER	March 2025
IGNITE , CSI GECBH	

PROJECT

AI-Powered Binary Analysis and reverse Engineering | (Main project)

Developed a hybrid malware detection system combining Graph Convolutional Networks (GCN) on Control Flow Graphs (CFGs) with CAPEv2 sandbox-based dynamic analysis. Implemented feature extraction using Radare2, pseudo-code generation with Ghidra, and a weighted confidence scoring mechanism for robust malware classification.

Vehicle Health Monitoring System | (Mini project)

A web-based application for real-time engine monitoring using a Random Forest model (65% accuracy) to detect anomalies in RPM, oil and coolant pressure/temperature, and fuel pressure. Built with React (frontend), Flask (backend), Socket.IO (real-time updates), and scikitlearn (ML inference/training).

SCT project/Internship | (team project)

Developing an AI-powered cardiology teaching platform with features including ECG/image enhancement, smart annotation, real-time presentation mode, clinical calculators, in-slide quizzes, and remote collaboration using Python and Flutter.

Virakupura project | (team project)

Developed an interactive sensory wall for Viragupura Sensory Park using ultrasonic sensors and DFPlayer Mini to trigger theme-based music aligned with wall paintings, creating an engaging, educational experience for children.

Quiz Website | (team project)

QuizzyCoder is an interactive quiz website with topic-based quizzes, real-time scoring, and instant feedback. Built with pure HTML/CSS/JavaScript, it features user authentication, a responsive UI with video backgrounds, and dynamic navigation for quiz selection, instructions, and results.
